

Jenkins Assignment 1

Q.1

```
1 pipeline {
2     agent any
3
4     stages {
5         stage('Build') {
6             steps {
7                 echo 'Building application'
8             }
9         }
10
11        stage('Test') {
12            steps {
13                echo 'Running tests'
14            }
15        }
16    }
17 }
```

Answer:

Here in the given question the problem was Jenkins was successfully able to scan the branch "dev" but the dev branch wasn't containing the Jenkinsfile so in order to solve the problem I have just pushed the Jenkinsfile to the dev branch so now the scan runs successfully.

Q.2

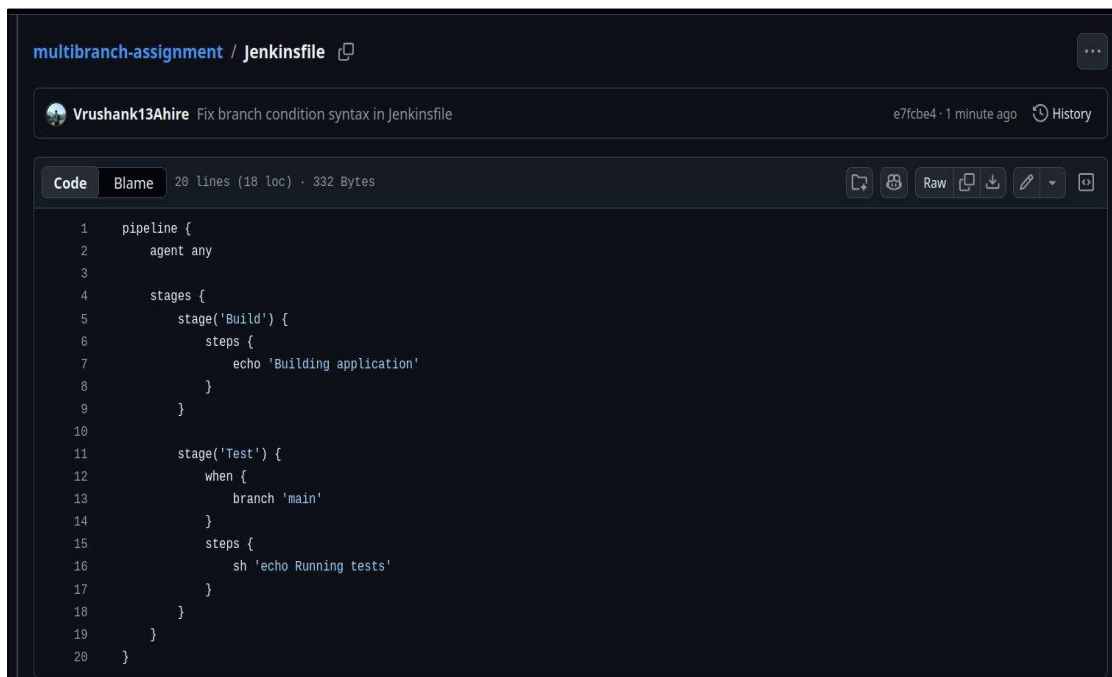

The problem:

```
stage('Test') {  
  when {  
    branchName 'main'  
  }  
  steps {  
    sh 'echo Running tests'  
  }  
}
```

Why there is error?

There is a syntax error in the above file in the third line “branchName ‘main’” so we need to replace it by “branch ‘main’”.

The fix:

The screenshot shows a GitHub repository named "multibranch-assignment" with a file named "Jenkinsfile". A commit by "Vrushank13Ahire" is displayed, titled "Fix branch condition syntax in Jenkinsfile". The commit message indicates a fix for the syntax error. The code editor shows the following Jenkinsfile content:

```
1 pipeline {  
2   agent any  
3  
4   stages {  
5     stage('Build') {  
6       steps {  
7         echo 'Building application'  
8       }  
9     }  
10  
11    stage('Test') {  
12      when {  
13        branch 'main'  
14      }  
15      steps {  
16        sh 'echo Running tests'  
17      }  
18    }  
19  }  
20 }
```

ooo

```
next quota of 60 in 45 min. Sleeping for 4 min 39 sec.
21:39:40 Jenkins is attempting to evenly distribute GitHub API requests. To configure a different rate
limiting strategy, such as having Jenkins restrict GitHub API requests only when near or above the GitHub
rate limit, go to "GitHub API usage" under "Configure System" in the Jenkins settings.
21:42:42 Jenkins-Imposed API Limiter: Still sleeping, now only 1 min 57 sec remaining.

```

Q.5

The problem:

```
stage('Deploy') {  
  when {  
    branch 'main'  
    branch 'dev'  
  }  
  steps {  
    sh './deploy.sh'  
  }  
}
```

The fix:

```
